

RESILIENT SEATED BUTTERFLY VALVES

Performance Series

Available in Wafer and Lug Styles

Max-Seal Performance Series valves are designed and manufactured in accordance with the requirements of USCG CFR 46 Category A.

MODELS:

Wafer 51

Lug 52

SIZE RANGE:

2" – 36"

PRESSURE RATING:

2" – 12" 200 WOG / Bidirectional Flow

14" – 24" 175 WOG / Bidirectional Flow

250 WOG – Optional – Unidirectional Flow

DI Nylon
Coated Disc

UNIQUE DESIGN FEATURES:

- Ductile Iron Body
- Rugged Heavy Duty Construction
- High Quality Epoxy Coating for Excellent Corrosion Resistance
- 2-Piece Stem Design Allows for Easy Assembly and Maintenance with Higher Flow Capacity
- ISO Actuator Mounting

AVAILABLE DISC

- 316 Stainless Steel, DI/Nylon coated, Aluminum Bronze
- Special Alloys Available

Max-Seal Concentric Butterfly Valves are backed by the resources and experience of over thirty five years of process valve and automation knowledge.

One piece body with extended neck allows clearance for flanges and up to 2½" of insulation.

Primary stem seals are formed by preloaded contact between the disc and seat. A secondary seal is effected by having a stem diameter greater than the stem hole in resilient seat. These seals provide a non-wetted body and stem, eliminating the need for corrosion resistant body material.

Field replaceable, phenolic bonded cartridge is blowout proof, stretch resistant, and non-collapsible, making it an ideal seat design for high velocity or vacuum service. Our resilient seat design eliminates the need for flange gaskets.

Valve sizes 16" & above are supplied with metal seat back up rings.

O-Rings are moulded in seat stem hole as standard

- High strength, square drive (2"–14") ensures a positive shaft to disc connection.
- Square drive offers direct ISO mounting of gear operator and automation equipment.
- Disc floats inside the seat for positive sealing and extended seat life.
- No pins or bolts exposed to flow.
- Offset shaft retainers mechanically retain the shaft in the body ensuring a blow out proof stem design.

Accurate and smooth machined profile of disc edge requires minimal deformation of the resilient elastomer liner to achieve a positive seal. The low deformation results in low torque, less wear of the seat liner, and increased operational life.

Max-Seal valves are designed for bubble tight shutoff in either direction of flow. Each valve is factory tested to 110% of their pressure rating

Blowout-proof stem design

A heavy duty butterfly valve, designed for ANSI Class 125/150 flanges. These comply with MSS-SP25, MSS-SP67, & the requirements of MIL-V-22133C (ship) Type 1, Class A-D

Valve sizes up to 16" meet API 609 standard; Sizes 18"-24" with fine thread drilling meet API 609 standard

- **Positive Valve Position:**

When the handle is parallel to the pipe, the valve is fully open. The orientation of the disc is indicated by a groove at the shaft end that is in line with the disc.

ACTUATOR MOUNTING

Max-Seal Offers a broad line of automation systems for precise proportioning of on-off control in either pneumatic or electronically powered units.

Cast Mounting Flange Accommodates all types of operators, offering two sets of slotted bolted circles ISO 5211 and industry popular type. It is designed to accept direct actuator mounting, some sizes may require a spacer plate.
